

Structural intelligence for tax teams

Cross-border tax structures are only as sound as your ability to see across them.

StructureFlow gives tax teams a living model of their entity architecture connected to real data, testable under any scenario, and accurate across every jurisdiction it touches.

"It's probably the most successful legal tech development that we have."

Jane Stewart, Head of Knowledge & Innovation,
Slaughter and May

The situation

Global tax structures are not getting simpler. The architecture that optimises tax is the same architecture that creates the greatest exposure when something moves and nobody notices.

Most tax teams manage that complexity across spreadsheets, disconnected diagrams, and documents frozen at the moment they were written.

88-94% of spreadsheets contain significant errors, and every PowerPoint is already out of date, which increases the possibilities of mistakes.

What changes

StructureFlow replaces fragmented documentation with a living structural model. Every entity, ownership relationship, and cross-border obligation in a single connected workspace holding the data behind the visual. Tax, legal, and deal teams work from the same structure.

Connecting directly to your entity data via an API, pull entity and relationship data into a live visual model. For tax teams dealing with complex cross-border structures spread across spreadsheets, PDFs, and bespoke registries, AI-assisted import means the structural model builds itself rather than being reconstructed manually every time something moves.

Map

One living model of your entity architecture. Every holding company, SPV, blocker, and cross-border relationship connected, current, and governed from a single source.

Model

Test structural assumptions before they're tested for you. Model the impact of a jurisdictional change, a new entity insertion, or a transfer pricing adjustment without touching the live structure. See the ramifications before they become a problem.

Move

Share with precision. Pull exactly the right section of the structural model into a regulatory filing, a deal memo, or an internal briefing without exposing the full picture. Bring offshore advisors, deal teams, and internal compliance into the same view at the right moment.

Tax efficiency is engineered into structure. The teams that maintain complete, real-time visibility across that structure advise with authority.

Think sharp. Move smart. Win the room.
